BARR'S

DAFFODILS

AND BEAUTIFUL "ENGLISH AMATEUR" TULIPS.

BARR'S DAFFODILS were Awarded the only GOLD MEDAL at the Second Great Daffodil Conference, 1890.

THE HOME OF NARCISSUS CYCLAMINEUS.

This unique Daffodil was found wild in its largest development in wet meadows. Rev. Dr. Watson, Largs, has flowered it annually since its introduction; Rev. H. Ewbank, Isle of Wight, grew it two or three years on rockwork, and three or four years in the flower border; Mr. G. H. Cammell, Hathersage, has it happy at the foot of a rockwork, and still more flourishing naturalized in grass, where it is freely increasing; at Kew, Mr. Dewar reported successful culture. Dr. Foster, of Cambridge, has grown it in his garden (subsoil of chalk) aince 1889, and each year it has improved, and is now increasing. Mr. F. W. Burbidge has grown it successfully since 1886 in pots, frames, out-doors against a warm house, and latterly bloomed it in the grass in a damp meadow. Mr. C. J. Backhouse, of Weardale, grows it successfully all over his garden, but on rockwork the flowers are largest. Mr. Osgood H. Mackenzie, of Poolewe, has it growing freely and increasing on the exposed top of a rockery. Mr. T. H. Burroughes, Stamford, has, since 1887, grown successfully Corbularia Citrina in milk pans sunk in the ground, filled with peat and kept constantly wet; we have tried this mode of culture on a large scale successfully.

BARR & SON,

12 KING STREET, COVENT GARDEN, LONDON.

Nurseries—LONG DITTON, SURREY. A few minutes from Surbiton Station (S.W.R.)
Visitors invited to the Nurseries during Spring, Summer, and Autumn, to see the Grand Collections of
DAFFODILS, IRISES, PÆONIES PERENNIAL SUNFLOWERS, MICHAELMAS DAISIES, and other HARDY
HERBACEOUS and BULBOUS PLANTS.

PRIZES for DAFFODILS, SILVER CUP & MEDALS for 1895, and BARR'S PRIZE MEDALS for TULIPS, see under Special Notices.

SPECIAL NOTICES.

Quality.—All bulbs and plants are carefully selected.
 Experimental Grounds at our Nurseries, Long Ditton, a few minutes from Surbiton Station, S.W.R. (close to the Surbiton New Recreation Grounds).—Visitors at all seasons will find many things of interest and beauty in Hardy Bulbs, Tubers, and Hardy Herbaceous Perennial Plants. In spring the brilliancy of our new Daffodils, Chionodoxas, Anemones, Tulips, etc., surpasses description. Visitors invited to enjoy the floral treat.
 Parcel Post.—We shall in all cases use the Parcel Post when cheapest and the articles ordered weigh under eleven pounds, and admit of being packed for safe transmission by "Parcel Post."
 Carriage by Ratl may be deducted at settlement of account on orders for Bulbs to any Railway Station in Great Britain, and to all ports on the Irish Coast.

Station in Great Britain, and to all ports on the Irish Coast.

V. Orders, paid in advance.—Carriage, in all such cases, will be prepaid.

VI. Returned Emptles.—A small charge is made for packages, but it returned within a fortnight, allowance is made for the same. Returned empties should have the sender's name on the address label for identification, and a notification should be sent by post, stating date of dispatch and name of Railway Company.

VII. Fruit and Forest Trees, Shrubs, Plants in pots, Soils, Watson's Lawn Sand, Manures, Anti-Blight and Insection of the page of the present and some control of the present of the pre

Insecticides-on these we do not allow carriage.

VIII. Five per cent, may be deducted from accounts if paid within one month from date of invoice,

IX. Money Orders and Postal Orders to be made payable at Covent Garden Post Office; these and all cheques should be crossed "London and County Bank." Small amounts may be remitted in Postage Stamps or Coin, in a Registered Letter.

X. ** Naming Daffodils.—Cut specimens of Daffodils we undertake to name correctly, at the charge of 6d. each, 2s. 6d. per dozen, 15s. per 100, to cover attendant expenses. Address all cut specimens to be named, accompanied by a remittance, to our Nursery, Long Ditton, Kingston-on-Thames, Surrey.

XI. Cut Daffodil Flowers.—When in bloom out-of-doors, cut specimens of Daffodils, correctly named, we

forward post-paid at a moderate charge, to cover attendant expenses, thus offering a good opportunity to those who wish to extend their knowledge of these lovely flowers of spring. If a list of the varieties possessed by the sender is enclosed, such sorts will be omitted. A remittance should accompany the order.

XII. Daffodil Illustrations and Coloured Plates can be had, post-free, at following charges-

No. 1. Two large uncoloured Illustrations—one representing a Group of Yellow Trumpet Daffodils, and the other a Group of White Trumpet Daffodils—drawn and arranged for the "Gardeners' Chronicle" by Agnes Barr. The two Plates for 1s. 6d.
No. 2. Beautiful Coloured Plate of a Group of White Trumpet Daffodils. 1s.
No. 3. Beautiful Coloured Plate of Daffodils, representing Incomparabilis Gloria Mundi, Incomparabilis Princess Mary, and Leedsii Beatrice. 1s.
No. 4. Beautiful Coloured Plate of Daffodil Bicolor Horsfieldi. 1s.
No. 5. Beautiful Coloured Plate of Daffodils, representing Cyclamineus (the Cyclamen-flowered Daffodil) and Triandrus albus (Angel's Tears Daffodil). 1s.
No. 6. Beautiful Coloured Plate of Daffodils, representing a Group of Poeticus and Burbidgei varieties, 1s.
No. 7. Beautiful Coloured Plate of a Group of Daffodils, including Cernuus pulcher, Johnstoni Queen of Spain, Bicolor J. B. M. Camm, Leedsii Superbus, Nelsoni varieties, etc., 1s.
No. 8. Coloured Plate of a Group of Barr's Beautiful New Daffodil "Queen of Spain." 6d.
A COMPLETE SET OF THE ABOVE PLATES SENT, POST PAID, FOR 6s.

A COMPLETE SET OF THE ABOVE PLATES SENT, POST PAID, FOR 6s.

With Orders for Daffodil Bulbs to value 21s. and upwards, the Two Illustrations, No. 1 will be pre-

sented; with Daffodil orders of £5 5s. and upwards, Nos. 1, 3, 7, and 8 will be sent.

N.B.—A few copies still remain of "Ye Daffodyl," price 1s. This is a record of the First Daffodil Conference, 1884, with a complete descriptive list of all known Daffodils, ancient and modern.

BARR'S PRIZES FOR CUT DAFFODIL FLOWERS, 1895. BARR'S DAFFODIL SILVER CUP.

(We hope our Scotch friends will "warsell" with the English growers for this trophy)

Designed specially for BARR & Son by Mr. H. G. Moon, and to be awarded by the R.H.S. to the finest collection of cut Daffodils staged at any one of the Meetings of the R.H.S. head in March, April, and May. The Cup is to be judged by points, and each competitor to choose his own time and varieties, but must not compete for the Cup more than at one Meeting; notice in writing to be sent to the Secretary of the R.H.S. in advance of the day of Databashie in a Thompson Cathon day of Databashie in a Thompson Cathon are producted to the Cut Default. of the day of Exhibition (which is a Tuesday), stating space needed for the Cut Daffodils to compute for "Barr's Silver Cup." On the morning of the Show the collection should be officially entered, and a card received indicating competition for Barr's Daffodil Silver Cup.

(Barr's Silver Cup Competition, open to all comers who live under the rule of Her Britannic Majesty.)

BARR'S DAFFODIL PRIZE MEDALS, for Cut Daffodil Flowers

(Open to all comers who live under the rule of Her Britannic Majesty),

to be competed for and awarded, 1895, by the Royal Horticulural Society. Notice in writing to be sent to the Secretary of the R.H.S., 117, Victoria Street, Westminster, London, in advance of the day of Exhibition (which is a Tuesday), stating space needed for the Cut Daffodils "in competition for Barr's Daffodil Medals." On the morning of the Show the collection should be officially entered, and a card received indicating "Competition for Barr's Daffodil Medals."

March 26th.—Collection of Cut Daffodil Flowers (Polyanthus Narcissi excluded). 1st Prize—Barr's Large Silver Medal. 2nd Prize—Barr's Small Silver Medal. 3rd Prize—Barr's Large Bronze Medal.

4th Prize-Barr's Small Bronze Medal.

April 9th.-Same Prizes as offered March 26th. April 23rd. - Same Prizes as offered March 26th. May 14th.—Same Prizes as offered March 26th.

Barr's Seedling Daffodil (not yet in commerce), raised in England, Scotland, or Ireland, and exhibited at any meeting during the scason, accompanied by the history of its origin. (Not a Polyanthus Narcissus.) Award-Barr's Large Silver Medal, or Small Silver Gilt Medal, at the option of the winner, who must give notice at once to the Secretary of the R.H.S. which Medal he wishes; no intimation being given a Silver Gilt Medal will be awarded.

@ A SPECIAL OFFER OF CHEAP DAFFODILS FOR NATURALIZATION, page 13.

BARR'S PRIZE MEDALS offered for Exhibitions of CUT DAFFODILS, see Special Notices.

Visitors are invited to Inspect BARR'S DAFFODILS in flower during March, April, and May, at their NURSERIES, LONG DITTON, close to the Surbiton new Recreation Grounds, being a few minutes from SURBITON STATION, South Western Railway, from Waterloo direct, or from any Station on the Metropolitan District Lines of Rail, changing at Wimbledon for Surbiton.

BARR'S BEAUTIFUL "ENGLISH AMATEUR" TULIPS, awarded the Large Silver Flora Medal of the R.H.S., May 9th, 1893; at the Temple Show the Silver Cup of the R.H.S., May 25th, 1893; aud May 8th, 1894, the Silver Gilt Flora Medal of the R.H.S. The collection of "English Amateur Tulipa" which may be seen during May at our NURSERIES, Long Ditton, number about 450 varieties, of these about 20,000 bulbs will this Autumn he planted, and the sight is expected to be the grandest of the kind ever seen in England, p. 15.

BARR'S PRIZE MEDALS FOR CUT BLOOMS OF ENGLISH AMATEUR TULIPS, 1895.

Barr's Prize Medals for the best Collection of "English Amateur" Tulips will be awarded by the Royal Horticultural Society, 117, Victoria Street, Westminster, London. The competitions will take place at three meetings. May 14th and May 21st, 22nd, and 23rd, and June 11th, to give Enthlitors from the North and the South equal chances. Ist Prize, Barr's Large Silver Medal. 2nd Prize, Barr's Small Silver Medal. Yof Prize, Barr's Large Bronze Medal. Notice to be given in advance of the Shows to the Secretary of the K.H.S., intimating the intention to compete for Barr's Medals. On the morning of the Show, the collection should be officially entered, and a card received indicating competition for Barr's Medals. The Competitions for May 21st, 22nd, and 23rd, will be in connection with the Temple Show.

Mr. J. W. Bentler also offers 1st and 2nd Prizes at the Meeting, 11th June, of the R.H.S. for "English Amateur" Tulips, The Royal National Tulip Society offer Prizes, 21st, 22nd, and 23rd May, Temple Show; full particulars will be found in the Arrangement of the R.H.S. for 1895.

(See GENERAL BULB CATALOGUE for Hyacinths, Tullps, Crocuses, Snowdrops, Chionodoxas, Snowflakes, Scillas, Lilies of the Valley, Dielytras, Spiræas, English Irises, Spanish Irises, Species of Irises, Ixias, Sparaxis, Tritonias, Babianas, Ranunculus, Anemones, Cyclamen, Hyacinthus candicans, Gladioli, Amaryllis, and a Choice Collection of Beautiful and Rare Bulbs and Tuberous-rooted Plants flowering at various seasons.)

BARR'S

HARDY DAFFODILS, DAFFADILLIES, DAFFODOWNDILLIES.

To these was Awarded the only Gold Medal of the Daffodil Conference, held in the Chiswick Gardens of the Royal Horticultural Society, April 15th, 1890.

NEWSPAPER NOTICES, 1894.

"About ten minutes' walk from Surbiton Station, keeping the path along the line, and passing beneath it to the left, the lover of Daffedils—and who is not?—may feast his eyes on a glerieus expanse of dancing blooms, not growing wild, but in the Nursery Greunds of Messrs. Barr, of Long Ditten. The variety is prebably newhere rivalled, and will astonish the univitiated. There are starr-shaped and trumpet-shaped flowers, yellow, cream, and white, serrated, and with twisted perianth, Cyclameu shaped, and with straight crowns; flowers with trumpets two inches wide, and diminutive blooms growing in a cluster on a single stem; trumpet blooms of primrees hue, and others with crange-scarlet cups and lemon perianth, though, to our mind, the simple Narcissus of the poets is till the loveliest of them all."—Ecno, April 9th, 1894.

the loveliest of them all."—Echo, April 9th, 1894.

"Hidden away in the labyrinth of lanes just behind Leng Ditton, on the Portsmonth road, are the gronnds of Messas. Barr and Son, famous for the cultivation of Tulips and other bulbs, but more particularly of Datfodils, which are just now justifying their old poetical reputation for stealing a march upon the swallow by bursting forth into sheets of gold. Mr. Barr is, we learn, away at this time in Spain, pursuing his search for new varieties of this seautiful flower, which has already been crowned by so many notable success; his son, however, is at hand to show us what is worth noting. The Long Ditton grounds extend to fifteen acres, of which five or six are deveted to Daffodil online; yet from this patch of land, it is found practicable to raise every year millions of bulbs. To the uninstructed eye a Daffodil is simply a Daffodil, but our horticulturists now reckon no fewer than five hundred varieties. Many sorts proclaim their recent accession by such modern names as Henry Irving and Mary Andersen. Some that are found growing wild in various parts of the United Kiusdem are supposed to have been brought here from abroad by the monks in old days. That unique little variety the Narcissus Cyclamineus, with its petals turned backwards, was at one time suspected of heing a mere dream. My companion, however, is able to pluck me a specimen. It loves the river's brum—in other words, delights in moist meadews. It was in 'Behemia' that the Daffodils of Autolycus 'began to peer,' and Pevdika, at the jeyous sight, gave utterance to immertal lines. Our guide plucks us a specimen of Sir Watkin. Its home is the Welsh valleys, but it is more than probable that the ozes of Owen Glendower never locked upon the like, for it is supposed to be what is called at 'escaped hybrid.' In strong centrast is the Gloria Mundi, with its perianth of delicate sulphur and its cup of red crange. Another flower, the Narcissus maximus, which our enductor nips of for us at the base of the stem, Cl

"Fashions in flewers change with the times, and there is no better instance of this than the attention now devoted to the cultivation of the once despised Daffodil, which is now to be seen in some five hundred varieties, the earliest blooming in February and the latest at the end of May. Messrs. Barrand Son, of Covent Garden, are chiefly responsible for the present popularity of these flowers, their constant exhibits at Spring Shows having had effect; while to them is also due in great measure the starting of the Daffodil mustry in the Scilly Isles, which has resulted so well for the inhabitants. The annual show at the Nurseries at Long Ditton this year is a very good one, and distinctly superior to that of last season, when the quality of the blooms was greatly affected by the dry weather. Some of the rarer sorts are very curious, the Augels' Tears, the Hoop Petticoat, the Cyclamen-flowered, the bold Emperor and Empress, the richly coloured Gloria Mundi and Glory of Leiden, and the fine Weardale."

WORLD, April 11th, 1894.

"It must be a very insensate visitor to those Nurseries who can gaze on the masses of delicate colour, and the innumerable beauties of form presented by the great beds of Daffodils now in bloom, and not feel with Wordsworth:

'My heart with pleasure fills, And dances with the Daffodils'

The centry visitor may wonder, and feel a pang of jealousy, on seeing the perfection to which Messrs. Barr have brought the culture of the Narcissus family, but to fully enjoy the sight it needs, perhaps, to go down from town, so hot, and dusty, and barren, in spite of the teuder green of budding trees in parks and squares. Refreshment of spirit is found in contemplating for a brief April afternoon the

Daffodil And the green world they live in.'

And the green world they live in.'

One of my greatest favourites is Mrs. Langtry. The perianth is creamy white, and so is the trumpet, but for a fringed edge just touched with geldou yellow. Beatrice is a pretty member of the Leedsii section; with its widespread periauth, and short, well-opened cup. Newer than either of these is P. R. Barr, with a pale-coloured perianth and lenger trumpet, deep gold throughout. Emperor seems to lead the van with its fine beld form and large size. It has now a rival, but so new, and so scarce, that Emperor will not suffer for some years to come. This rival nude its debut at the Reyal Herticultural Society's Show on April 10th; it is christened Weardale Perfection, and has leaves measuring 1 inch across, while the diameter of the flower is 6 inches. To fly from one extreme to another is to mention, after Weardale Perfection, a quaint, pale Narcissus, Angels' Tears, and a wee Jonquil, brilliant in colour and sweet-scented, bearing a dainty single flower barely a quarter of an iuch across. Tulips are well worth a visit. There is a superb yellow one, Ophir d'Or; Koh-i-noor has satiny petuls of deep crimsen with a purple sheen; but the most wonderful of all is White Von Vondel, a Tulip not only remarkable in size (its petals are six to eight inches across), but of the purest white that has yet been obtained in this flower."

Queen, April 21st, 1894.

QUEEN, April 21st, 1894.

"Until a week ago the Daffodil, that most joyons of spring flowers, appealed to me for its beauty, rather than its seent, and never did I realize until sauntering through the Surbiten Nurseries of Messrs. Barr and Son, of 12 King Street, Covent Garden, the sweetness of perfume of the growing Daffodils. Here they are to be seen in their thousands, the gardens being literally one sheet of yellow bloom, save for thick masses of crimson that here and there break up the harmony of gold, and prove upon proximity to be Tulips decked in their richest frocks. At their Long Ditton home the Daffodils are seen in the full glory of perfection. There are in all five hundred varieties, the Nnrseries covering no less than fifteen acres."—Gentlewoman, April 21st, 1894.

This is what Mr. William Robinson said about Daffodils and their adaptation, in his Paper at the Conference on Hardy Flowers, Chiswiek, July 7 and 8, 1891.

"The most important of all early flowers is the Narcissus. Five years ago I planted many thousands in the grass, the most important being the Star Narcissus (N. incomparabilis, &c.). They have thrivon admirably, flowered well and regularly. They are delightful when seon near at hand, and also effective in the picture. With the common English, Irish and Scotch Trumpet Daffodiis I have had good results. The Tenby Daffodii is very sturdy and pretty. A very delightful feature-of the Narcissus meadow gardenius is the way great groups in succession follow each other. Fivo years ago I cleared a little valley of various fences. Through this runs a streamlot, and we grouped the Poets' Narcissus near it, and in a little orchard that lay near, and through a grove of Oaks. This year the whole landscape was a picture, such as one might see in an Alpine valley!"—See The Garden of April 14, 1894, page 306. The annual effect continues.

BARR'S DAFFODIL SILVER CUP, specially designed by Mr. H. G. Moon, will be awarded. 1895, to the finest collection of Daffodils exhibited at either of the Meetings of the Royal Horticultural Society, held at The Drill Hall, Westminster, February, March, April, or May. Competitors can only exhibit once for this Prize, and, in entering, should see that the entry is duly made for Barr's Daffodil Silver Cup. The judging will be done by "Points," and at the close of the Daffodil season the R.H.S. will award the Cup to the exhibitor who has gained most "Points," quality will be an important consideration. The above arrangement places English, Scotch, and Irish Exhibitors on equally advantageons footings. The Dates of Meetings will be given in our Seed Catalogue, issued 1st January, 1895.

Au Engraving of Barr's Daffodil Silver Cup will shortly appear in the "Journal of Horticulture."

CULTURE, ADAPTATION, ETC., OF THE DAFFODIL.

DAFFODILS are the most graceful and beautiful of all hardy Spring flowers; they have for centuries adorned our gardeus, and withstood nuinjured our severest winters better than any other flower of spring.

For beds, mixed borders and shrubberies, the Daffodil surpasses all spring flowers in beauty and for general effect, and when it is unturalized in grass, in orchards, woodland walks, sloping bauks, meadows, margins of lakes and ponds, the effect is superb. All Daffodils may be naturalized, but the strong growers make the finest display, and include such sorts as Emperor, Empress, Horsfieldi, many of the white trumpet varieties, all the Incomparabilis, Barrii, Leedsii, Backhouset, Nelsoui, Bernardi, Tridymus, Odorus, Burbidgei, Poeticus, etc. Many sorts which do not thrive in gardens will sueceed naturalized, and we advise that those kinds which do not take kindly to garden culture be removed to the orchard, meadow or hedgerow. In such places the noble flowers of the Daffodil are seen to great advantage. The sleuder and dwarf-growing sorts, Nanus, Minimus, Juncifolius, Triandrus, Corbularias, Cyclamious, etc., do well on rockwork, and select places in grass; Minimus, Juncifolius, Triandrus, Corbularias, Cyclamious, etc., do well on rockwork, and select places in grass; Minimus, Juncifolius, and Triandrus are found wild in mountain pastures where the soil is shallow and firm; Corbularia and Cyclamineus where the soil is soft and wet in winter and spring, but dry in summor. Mr. T. H. Burroughes, Stanford, has, since 1887, grown successfully Corbularia Citrina in undrained milk pans sunk in the ground, filled with peat and always kept wet; we can, from personal experience, endorso this mode of culture. For outture under glass, 3 to 6 bulbs of the strong growing sorts cultivated in a pot, the effect is splendid; of the dwarf growing kinds enumerated 6 to 18 hulbs in a pot give a fine effect, and charming as edgings in conservatorics. All kinds of Narcissus can be naturalized in grass out-of-doors. Daffodil flowers

flowers in May.

Out-of-doors the various kinds of Daffodils form a natural succession. Iu mild seasons, N. Pallidus præcox and N. Obvallaris flower early iu February, and are followed by others in successiou.

In arranging Daffodils for effect in the flower garden, or in potting in for indoor decoration, let it be borne in mind they form a natural succession, which is fully explained nuder the heading of each group, and simply noticed here to draw attention to the fact. First, the Trumpet Daffodils are the earliest. Second, Incomparabilis, Barrii, Leedsii, Odorus, Triandrus, Early-flowering Poeticus, and Burbidgeis. Thata, Nelsoni, Tridymus, Backhousei, Bernardi, and Jouquils. Fourth, Bifforus, late-flowering Poeticus and Burbidgeis, Schizanthes and Gracilis. In the middle season, representatives from all the groups may be found in bloom at the same time, therefore, those who can make but one visit to our Bulb Nursery, should do so in April.

The Daffodils named in the following pages comprise all the best sorts in commorce. They consist mostly of

The Daffodils named in the following pages comprise all the best sorts in commorce. They consist mostly of varieties we have introduced, raised by the late Mr. William Backbouse, and known as the "Weardale Dajjodils," also by the late Mr. Edward Leeds, and known as the "Longford Bridge Dajjodils." These New Dafrodils became the property of Mr. Peter Barr, who classed and named them. A complete descriptive list of all Daffodils known to exist from the days of Parkinson to 1834 is appended to a brochure of the First Daffodil Conference, by F. W. B., and entitled "Ye Narcissns or Daffodyl," price is.

entitled "Ye Nareissns or Daffodyl," price 1s.

CULTURE AND ADAPTATION OUT OF DOORS.—The Daffodil may be grown in any soil and situation, but thrives hest in a fertile well drained loam (avoid manure as much as possible), and, in the warmer parts of Eugland, when possible, plaut in a situation facing north or north-east, protected from north or north-east winds. In planting, the top of the bulb should be two to three inches below tho surface, according to its size; in permanent beds, etc., summer flowers may be cultivated over the bulbs. For such permanent beds use the large-thowering trumpet and Incomparabilis varieties, also Barrii, Leedsii, Nolsoni, Burbidgei, etc.; for edgings, use the dwarf growing kinds, Cyclaminens, Minor, Nanus, Minimus, Triandrus albus, Juncifolius, and Corbularias.

CULTURE AND ADAPTATION INDOORS.—Use three to six hulbs of strong-growing sorts, according to size of bulb, for a 4 or 5-inch pot; small-growing kinds, such as N. Minimus, Nanus, Minor, Cyclamineus, Triandrus, Juncifolius, and Corbularia, a greater number of bulbs should be used. These dwarf-growing, small-flowered species are most charming in pots (see list, page 31). If Daffodils are grown for cutting early in the season, plant thickly, in boxes of 15 inches by 10, and 5 to 6 inches deep, using ordinary potting soil. The pots or boxes should then be placed out of doors, on a bed of ashes, and covered with 6 inches of the same material, or with cocon fibre, if it can be had. The pots on hoxes to remain out of doors till full of roots, and top growth has commenced. Portions may then be removed indoors, in succession, to a moist forcing-honse, and pleutifully supplied with water, care being taken that the plants do not get drawu, from an insufficient supply of air.

A selection of Daffodils for succession out-of-doors should consist of varieties from the three

A selection of Daffodlis for succession out of doors should consist of varieties from the three groups. The Trumpet and Corbularia Soctions thewer, one variety following the other, from February till May. The Nonsuch and the other hybrid sections begin flowering in March, and succeed each other till May. The Burbidge's Daffodils, the Poet's, the Bunch-flowered, etc., commucuo flowering early in April, and furnish a succession of blossoms till June. When grown under glass, all the Daffodils flower probably a month earlier than the periods above named.

Cut blooms of Daffodils are always acceptable, and are in ahundance out-of-doors at a season when other flowers are scarce. They supplement and associate admirably with hot-house flowers. For nearly thirty years, for three months in Spring, cut flowers from our collection of Daffodils have been exhibited at the various Londou Flower Shows and Fortnightly Mectings of the ROYAL HORTICULTURAL SOCIETY, also at the Spring Flower Shows held at the ROYAL BOTANIC GARDERS, CRYSTAL PALACE, ROYAL AQUARIUM, BIRMINOHAM, MANCHESTER, etc.

At the above-named Exhibitions we have been awarded Gold and Silver Medals, Prizes, Certificates, Votes of Thanks, etc. Our Display of Daffodils at the Second Great Daffodil Conference, April 15th, 1890, was awarded the ONLY GOLD MEDAL. At the Birmingham Daffodil Show, April 18th, 1894, we were awarded the PREMIER PRIZE for the "FINEST DAFFODIL" exhibited. During the season of 1894 we were awarded Sixteen Medals and Five Certificates.

12 and 13 King St., Covent Garden, 1895.]

BARR'S PRIZE MEDALS OFFERED FOR CUT DAFFODIL FLOWERS, February, March, April, and May, 1895, see Special Notices, p. 2 of cover. BARR'S DAFFODIL PRIZE CUP for 1895, see p. 3.

SELECTIONS OF

BARR'S High Class & Distinct Hardy DAFFODILS (NARCISSI),

EMBRACING GROUPS MAGNI-CORONATI, MEDIO-CORONATI, and PARVI-CORONATI.

The varieties in these assortments consist largely of the fine hybrids and varieties raised by the late Mr. William Backhouse and Mr. Edward Leeds. They are all distinct one from the other, so that buyers cannot fail to be fully satisfied with them. Daffodils in these assortments may all be used for pot-culture or forced for cut flowers, or planted in beds, in flower borders, naturalized in grass, in woodland walks, orchards, by streams, lakes, etc., the effect in Spring far surpassing that of any other family of plants.

EXPLANATORY NOTES.

The following list of Daffodils embraces the highest class, and most distinct varieties, surpassing in beauty and diversity all other assortments offered to the public. The varieties represent the cream of our Collection (about 500 kinds), mostly new sorts, some of which were offered for the first time 1887, 1888, 1889, 1890, 1891, 1892, 1893, and the present year.

Those without any special indication were known before these New Daffodils were introduced by us.

- Explanation why different sized types have been used in the NAMES of the Daffodils.
 - (1). EMPEROR. This type indicates the higher quality.
 - (2). ALBICANS. This type indicates the next quality. (3). MAJOR. This type indicates the lower quality.

The very distinct species which do not admit of comparison, such as Corbularia, Cyclamineus, Minimus, etc., we place with the higher quality, and those which rank above the higher standard are indicated by the word extra.

DAFFODILS. - GROUP I. - MAGNI-CORONATI (BAKER).

Ajax of Salisbury, Haworth, and Herbert, Pseudo-Narcissus of Parkinson; including Corbularia (Bulbocodium). The Hoop Petticoat, or Medusa's Trumpet.

DISTINGUISHING CHARACTER.—Crown or trumpet as long or rather longer than the divisions of the perianth.

This Group I. is commonly called Trumpet Daffodils, which flower in the following succession: N. Pallidus præcox, from January; Obvallaris, Minimus, Nanus and Minor, from February, closely followed by Cyclamineus, Santa Maria, Oporto Yellow, Rugilobus, Major, Spurius, Golden Spur, Henry Irving, the English Lent-Lily, the Scotch Garland Lily, Horsfieldii, Empress, Johnstoni Queen of Spain, Princeps, Cernuus, Colleen Bawn, etc., which are followed by Emperor, Maximus, Dean Herbert, Michael Foster, James Walker, the two Camms, the two Burbidges, Dr. Hogg, Cernuus pulcher, Exquisite, Grandis, etc.

All the Trumpet Daffodils are prized for pot-outture, flowering under glass with the Hyacinth, and should be oultivated in the same way, three to five roots in a 4 or 5-inoh pot. The out flowers of Daffodils are much in demand for bouquets and vases. For general cultural directions, see page 3.

DAFFODILS.-GROUP II.-MEDIO-CORONATI (BAKER).

Queltia, Philogyne, Ganymedes, etc., of Salisbury, Haworth, and Herbert; Peerless, Nonsuch, Chalice-Shaped Crown, etc., of Parkinson.

DISTINGUISHING CHARACTER—Crown or cup half as long as the divisions of the perianth, but in one or two cases three-quarters as long.

The graceful varieties of this group are hybrids, excepting Triandrus, Odorus, and Juncifolius, which are species. Incomparabilis is found wild in France, but Herhert, Leeds, and Backhouse produced it by crossing Poeticus with a Trumpet Daffodil. Macleaii (Panza bicolor of Salisbury) is considered to be a hybrid between a Tazetta and a Trumpet Daffodil. Although we have no positive data as to the parentage of all the new hybrids and varieties described in this group, we think it may fairly be assumed that Poeticus and the Trumpet Daffodils gave all the varieties of Incomparabilis, Barrii, Leedsii, "the Buchartis-like Daffodil." Humei, Nelsoni, Backhousei, and Sabini. Bernardi we know to be a hybrid between Poeticus and Variiformis, Mr. Barr having collected it from amongst these two species. Tridymus is a hybrid between a Tazetta and a Trumpet Daffodil.

The varieties in this group commence flowering in March, and furnish a succession till May. They are all of great elegance and heauty, and, as cut flowers, are extensively used for furnishing vases and table bouquets.

All the varieties enumerated in Group II. are prized for pot-culture, flowering under glass with the Hyacinth, and should be cultivated the same way, 3 or 5 large bulbs in a 5-inch pot: Narcissus with small bulbs, such as Triandrus and Juncifolius, 6 to 12 bulbs to a 5-inch pot. The cut flowers of this Group are much in demand for bouquets and vases. General cultural directions, p. 3.

NARCISSUS INCOMPARABILIS.

(Star Narcissus.)

Nonsuch, Peerless, and Chalice-cupped Daffodils.

All the varieties of Incomparabilis are exceedingly decorative in pols, and are extensively used for this purpose, 3 or 5 bulbs in a 5-inch pol. For beds and borders very decorative, naturalized in grass very effective. See what Mr. William Robinson says of them under the name "Star Narcissus," p. 3.

12 and 13 King St., Covent Garden, 1895.]

DAFFODILS.—GROUP III.—PARVI-CORONATI (BAKER).

The Small-crowned Daffodil or True Narcissus, which includes

Burbidgei and Poeticus (the Purple-ringed Daffodil); Biflorus (the Primrose-Peerless Daffodil); Polyanthus or many-flowered Narcissus (Hermione and Helena of Haworth); Gracilis, Schizanthes orientalis, and Sweet-smelling Jonquils.

DISTINGUISHING CHARACTER—Crown less than half as long as the divisions of the perianth.

In this series, Poeticus (the purple-ringed Daffodil) is the true Narcissus; Burbidgei is a hybrid one remove from Poeticus, and is the connecting link between Groups II. and 11I. (See Coloured Plate in "The Garden," 1880.) Biflorus is Parkinson's Primrose-Peerless, and is certainly a hybrid of Tazetta and Poeticus, Mr. Barr in his travels this year having found it and its parents growing together in two different localities in the South of France. Gracilis and Tenuior are the Helena of Haworth; Jonquil, the Jonquilla of Linnæus; Polyanthus Narcissus, the Hermione of Haworth and Tazetta of Sibthorp.

The early-flowering Poeticus varieties commence flowering in March, and the late-flowering varieties close the Daffodil season in June. Burbidge's hybrids of Poeticus flower in succession from March to middle of May. Gracilis, Schizanthes orientalis, and the Double White Gardenia-flowered Daffodil, are among the latest to boom.

The Daffodils in this Group are graceful pot-plants for indoors, flowering with the Hyacinth, and should be cultivated in the same way, 3 or 6 bulbs in a 4 or 5-inch pot. The cut flowers of this section are greatly in demand for bouquets and vases. General cultural directions, page 3.

| | , |

Mr. T. H. Burroughes, Stamford, has successfully grown, since 1887, the Large Sulphur Hoop Petticoat Narcissus in undrained milk pans filled with peat and kept always wet; he raises the soil in which the bulbs are planted above the level of the rim of the pan. We have tried this mode of culture with success, and recommend it for all the varieties of this section, except the White Hoop Petticoat. N. Cyclamineus likes moisture, but not so much as the Hoop Petticoats. N. Minimus, N. Triandrus, N. Juncifolius, and N. Rupicola are found in a wild state growing in shallow soil.

A SELECTION OF

CHEAP DAFFODILS FOR NATURALIZATION IN GRASS. &c.

On page 3 will be found an extract from Mr. William Robinson's Paper read at the CONFERENCE ON HARDY FLOWERS, CHISWICK, July 8 and 9, 1891. The grand effect produced, combined with the pleasure he enjoyed at Gravetye Manor from Narcissi planted in MEADOW, ORCHARD, and OAK GROVE, was such as he might have experienced in an Alpine valley, but with this difference, he could gaze on the scene and enjoy the pleasure daily, and all this at a comparatively small outlay. Mr. Robinson has had a successful experience of nine years with his naturalized Daffodils

[Barr and Son,

BARR'S BEAUTIFUL "ENGLISH AMATEUR" TULIPS.

May-flowering.

Awarded by the Royal Horticultural Society a Silver Medal, May 9th, 1893.

Awarded at the Temple Show, the Royal Horticultural Society's Silver Cup, May 25th, 1893, and the R.H.S. Silver Gilt Flora Medal, May 8th, 1894.

These beautiful Tulips in the South of England commence flowering according to the earliness or lateness of the season, from the first to the last week in May. Dr. Hogg can testify that if looked after they may be enjoyed for a month. The "ENGLISH TULIP" is pre-eminently an amateur's flower, and has been so for about 300 years. London was at one time the centre of Amateur Tulip growers, Scotland then dividing the honour. The Amateur element at the present time is mainly centred in Derbyshire, Lancashire, and Yorkshire, and in these counties many fine varieties have been raised during the last forty years. Amateurs who may be induced to take up Tulip culture will be pleased to read the following extract from the Manchester Guardian, 2nd June, 1892, from the pen of the late Mr. Samuel Barlow, one of the greatest authorities on "ENCLISH AMATEUR" TULIPS:—

"The best Amateur Tulips known to exist, or that have ever existed, have been raised in England, principally in the Northern counties—Lancashire, Yorkshire, and Derbyshire. Over forty years ago the late Dr. Hardy, of Warrington, in a series of papers to the Midland Florist, completely settled all the points of excellence which go to make a first-class Florist Tulip, and his definitions have never since been disputed. Since then the cultivation of Florist Tulips has much improved, especially in the three counties named, although, singular to say, it has almost died out in the South of England, where, fifty years ago, the most enthusiastic Tulip growers made London their centre for exhibitions. There are distinct evidences now of a revival of interest in the South of this grand old flower, and I hope that the Exhibitions of the Royal National Tulip Society will give additional stimulus to the cultivation and love for this fascinating flower."

Barr's Prize Medals for the best Collection of "English Amateur" Tulips will be awarded by the Royal Horticultural Society, 117, Victoria Street, Westminster, London. The competitions will take place at three meetings, May 14th and May 21st, 22nd, and 23rd, and June 11th, to give Exhibitors from the North and the South equal chances. 1st Prize, Barr's Large Silver Medal. 2nd Prize, Barr's Small Silver Medal. 3rd Prize, Barr's Large Medal. Notice to be given in advance of the Shows to the Secretary of the R.H.S., intimating the intention to compete for Barr's Medals. On the morning of the Show, the collection should be officially entered, and a card received indicating competition for Barr's Medals. The Competitions for May 21st, 22nd, and 23rd, will be in connection with the Temple Show.

Mr. J. W. Bentley also offers 1st and 2nd Prizes at the Meeting, 11th June, of the R.H.S. for "English Amateur" Tulips. The Royal National Tulip Society offer Prizes, 21st, 22nd, and 23rd May, Temple Show; full particulars will be found in the Arrangement of the R.H.S. for 1895.

The Rev. Francis D. Horner, a most successful Amateur Tulip cultivator and raiser of new varieties, read a valuable paper on "Amateur Tulips" to the Fellows of the Royal Horticultural Society, April 19, 1892, and the same will be found in Vol. XV., Parts 2 and 3, "Journal of the Royal Horticultural Society," page 99. We commend it for perusal by intending Amateur Tulip Cultivators.

In "Hardy Florist Flowers," by Mr. James Douglas, there is a chapter on "English Tulips," which deals with the whole subject of planting, lifting, and general culture.

Our Woodcuts represent the upper sections only of Tulip petals. The one on the left shows what is termed a feathered flower, the colour being confined mainly to the edge of the petal. The right hand block represents a flamed flower, the colour runs round the edge of the petal, and in the centre breaks into a flame.

The Woodcuts are simply

intended as representations of typical markings. But it is as well to state, however, that there is a certain variability in the colouring of these "Amateur Tulips" from one year to another, and it is seldom a flower repeats exactly the same amount of colouring in its dress, but even this is not without its interest to Amateurs; a feathered flower will sometimes become flamed, and a flamed flower feathered. The colour will sometimes be heavier and sometimes lighter, this difference being often the result of culture.

12 and 13 King Street, Covent Garden, 1895.]

Our Collection of "English Amateur" Tulips numbers about 450 varieties, of these about 20,000 hulbs will be planted this Autumn, and the flowers may be seen by visitors during May, 1895, at our Nurseries, Long Ditton, a few minutes from Surbiton Station, on the South Western Rail.

Condensed from the Journal of Horticulture, June 2nd and 9th, 1892:-

"ENGLISH TULIPS."—The name, "English Tulips" has something beyond insular pride to recommend it. In the 333 years which have clapsed since Conrad Gesner brought Tulipa Gesneriana from Constantinople, marvellous work has been accomplished by hybridisers with this species, but it was in England (during the last fifty years) that the properties which are most esteemed in the best Tulips of to-day—perfect form, smoothness, substance of petal, and clean base—were developed. . (From a gathering together of bulbs from many sources during 1893, we find that the old Tulip Amateurs in England, Scotland, and Holland grew a larger and coarser flowering Tulip than the Amateurs of the present day, and very few of their flowers possessed the clean base which at the present period is an indispensable requisite. The shape and substance was also much inferior to the Tulip of the present time. The Scotch Amateurs have died out, and the Dutch growers have made no forward progress, so that the remarks in this article of the "Journal of Horticulture" refer to the Tulips of the English Amateurs in the Northern Counties, where progress has been steadily going on for the last fifty years.

The absorbing interest of the "ENGLISH TULIPS" does not lie solely in their beauty of form and rich markings. Their life-history is not the unbroken, uneventful one that other flowers enjoy. There eomes a time when the self-coloured seedling flower is a self no more, the rose, searlet, or violet shining above the central silvery moon or ground of the Bybloemens and Roses, or the golden base of the Bizarres, breaking upwards into marvellous featherings and flamings of colour, reminding one of the contrast between the dull cocoon and the brilliant, fluttering butterfly. The new shades are not the vagaries of a day, but, once the flower breaks into its radiant colours, they remain to dazzle and delight those who see them. The "breeder" (seedling) that is, the self-coloured Tulip in its first stage is, so to speak, but the canvas prepared for the painting, and when in due course the colours are mixed and the picture completed, it is one that will not fade under the hand of time.

For a long time it seemed as if they would bave no trade home; but a colony, and not a small one, has been formed at Long Ditton in Messrs. Barr & Son's grounds of Daffodil fame. If Mr. William Barr ean do for and with these Tulips a tithe of what the energetic and devoted head of the firm did for the Daffodil, he will make himself a name that will not soon be forgotten. The young fancier is enthusiastic, diligent, and eareful, as was evident when note was taken on a sultry day of 5000 or 6000 individual blooms, under the eool guidance of a veteran (Dr. Hogg).

Condensed from the Journal of Horticulture, May 4th, 1893:-

The Dutch Florists' Tulips are wholly distinct from and distinctly inferior to the type of "ENGLISH AMATEUR"

TULIPS. This is plainly seen when extensively grown in comparison, as in Messrs. Barr & Son's Collection.

It may be asked, "Why are not these 'English Amateur' Tulips more popular? Because there has been no attempt to popularize them. Connoisseurs as a hody have valued them for their rarity, and have not willingly let them "go." Years of unremitting eare in their preservation, following years of waiting from the flowering of seedlings to the breaking from the self-coloured or breeder stage into the flames of colour or feathered fringes that come to stay (see Woodcuts), and give life-long pleasure to those who own and cherish them. Is there much wonder that they should be jealously guarded.

The choicer and rarer named varieties of "ENGLISH AMATEUR" TULIPS have hitherto been difficult to obtain, but Mr. Peter Barr has taken them in hand, and the same energy, perseverance, and knowledge which, from the smallest of beginnings, resulted in the world-famed collection of Daffodils, is bound to have effect in a very material way in inciting public interest in our "English Amateur" Tulips.

Mr. Barr is a believer in the dietum that the supply of anything good creates a demand, as his "English Amateur" Tulips come from the best sources and are increased at Long Ditton, where they now number many thousands. The demand for bulbs last year was good, and has given an impetus to production.

The Long Ditton Collection is in full beauty now (early in May), and the collection, while full of interest to experts, affords valuable lessons for learners. Day by day, from far and near, come old florists and young aspirants to view them. Every flower is seanned, its points noted, and merits or defects recorded.

Extracted from the letter of an Amateur grower of "English Amateur" Tulips:—"Ever since you were here I have been noting and criticising my Tulips, and to such an extent has the subject grown upon me I am quite as daft on the subject as ever you were on the Daffodils."

Condensed from the Journal of Horticulture, May 10th, 1894:-

"ENGLISH AMATEUR" TULIPS are the most brilliant of all the hardy flowers of early summer, and there is hope that their claims to attention will not be so completely ignored in the future as they have been in the comparatively recent past in the southern parts of England, for in the north there have always been a number of connoisseurs who have devoted great attention to and derived an extraor dinary amount of pleasure from their Tulip beds and shows.

That a revival in public interest is being awakened in these brillant, chaste, and refined flowers is apparent. Information respecting them is more generally sought for, and a demand for bulbs of approved varieties is springing up. Mr. Peter Barr, with his acute intuitiveness and boundless energy, is trying to meet the demand (or shall we say create it?) by increasing his supplies, and amateurs who have become fascinated by their flowers are influencing others in the same direction, while the once seldom-heard-of Florists' Tulips are now recognized by the Royal Horticultural Society. Tulip shows have done much to teach those who visit them wherein the beauty consists of the blooms that stir the souls of those who love because they understand them.

Barr and Son.

Undoubtedly one of the best private schools for instruction to be found is a Tulip bed, not a mere mass of flaming flowers such as may be seen in hundreds of gardens; but a genuine canvas-covered Tulip bed, planted on recognized cross lines of seven bulbs in a row, no more and no less, of bizarres, byblœmens, roses, and so on from end to end, every variety cherished for some precious possession, and of course all named. But Tulip beds are not everywhere to be found. We may have to travel miles to see one; but to the novice there is the freshness of novelty to repay him, and he discovers how much there is to learn, also what a fund of interest Tulips possess, and the extraordinary pleasure they give to their owners. The writer has now had four Tulip lessons in as many years, and the dates impart a lesson. The first visit was June 6th, 1891; the second June 3rd, 1892; the third April 29th, 1893; and the last May 5th, 1894. This at once indicates the relative earliness and lateness of the seasons, for Tulips are emphatically children of the sun, and come only at his bidding.

When a really good collection of Tulips is in the market it would seem as if all the world of fanciers were after it, and the disposal can only be determined by amicable division, so strong is the desire for their possession. The outside world cannot understand this, simply because outsiders—the unlearned in Tulip attributes—do not understand what is to the cognoscenti the rarest gems in the floral world.

For decorative purposes late Tulips of the section under notice are highly effective by their chaste or rich markings, even if defective in certain points as viewed from the florists' ideal. Mixed unnamed collections impart beauty to the garden, while affording opportunity for studying the flowers. In this way the eye becomes educated, and in time collections are formed to be cherished; but some named varieties of high repute are scarce, and prized the more by those who are fortunate in possessing them. Still, many fine named varieties are sufficiently plentiful to be sold at moderate prices, and are as beautiful as some of the rarer sorts, so that price is often more an indication of rarity than of superior beauty.

BARR'S

BEAUTIFUL

"ENGLISH AMATEUR" TULIPS

MAY-FLOWERING.

Awarded by the R.H.S. Silver Flora Medal, May 9th, 1893; a Silver Cup, May 25th, 1893; and a Silver-Gilt Flora Medal, May 8th, 1894.

BARR & SON'S SELECTIONS.

Explanation of the terms Rectified and Breeder Tulips.—Rectified Tulips are those in which the original seedling self-colour has changed into a flamed or feathered variegation. Breeder Tulips are those which are still in their original seedling self-coloured state, but may at any time become Rectified.
